

## Examples of pre-teaching questionnaire

### DHB Family Violence Intervention Project

#### Staff Questionnaire

#### Why a questionnaire on FV?

\_\_\_\_\_ DHB is developing a new family violence intervention model as indicated by the Ministry of Health. It is anticipated that family violence intervention will become part of all DHB's core business because violence causes significant health effects for victims of abuse.

#### Uses of the information

It is important that we develop a comprehensive training package around family violence which responds to staff needs that recognises the level of knowledge/skill which staff already hold and which enables staff to feel confident in undertaking this intervention. By taking the time to complete this brief questionnaire, you will enable us to do this more effectively.

It is also intended that we use this information in order to evaluate the effectiveness of our training package at a later date.

#### Confidentiality

All information that you provide will be anonymous. However, if you are comfortable doing so, you may choose to include your demographic information in the boxes below. We will compile a summary of the data and make that available to the Family Violence Intervention Workforce Development Group only.

#### Employee Assistance Programme

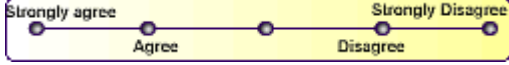

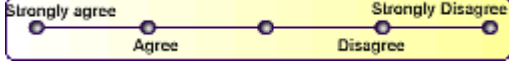

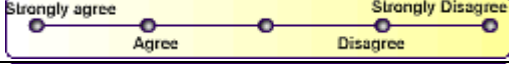

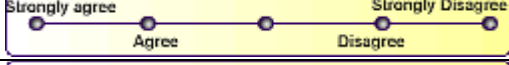

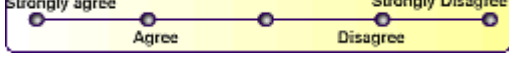

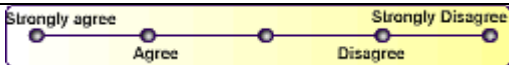

We recognise that some of our staff may have experienced, or are experiencing, family violence. All \_\_\_\_\_ DHB staff are able to access Employee Assistance counseling/support that is free of charge and confidential. Staff can access EAP services by self-referral or via Occupational Health.

Please complete the demographics section below by writing in the spaces provided and ticking the appropriate age range box:

Gender:		Profession:			Ethnicity:		
Age Range:	Under 20	21-30	31-40	41-50	51-60	60+	

Please place a cross (X) along the scale which most accurately sums up your response to each of the following statements.  
Any additional comments are welcome and can be provided in the column to the right.

			Comments
1	It's not easy to leave the relationship even if the violence is really bad		
2	Family violence is not <u>caused</u> by alcohol/drugs		
3	Some people must enjoy being abused		
4	Sometimes people provoke the abuse		
5	Men are just as likely to be victims of family violence as women		
6	Family violence mainly happens in low socio-economic families or particular ethnic groups		
7	Women are just as violent as men		
8	I can spot the kind of person who is likely to be <u>abusive</u>		
9	I can spot the kind of person who is likely to be <u>abused</u>		
10	I feel that patients could be offended when I ask them about partner abuse		

11	It is my responsibility as a health professional to respond to the issue of family violence		
12	I have a good understanding of the dynamics of family violence.		
13	I have a good understanding of the effects of family violence on victims/children		
14	I would recognise when a health professionals response to family violence was unsafe		
15	I feel confident to recognise the signs of partner abuse in patients who present		
16	I feel confident that I could take a history for partner abuse		
17	I feel confident that I could respond safely when a patient discloses partner abuse		
18	I would advise patients who screen positively for partner abuse to leave their partner.		
19	I have a good understanding of the role which CYF/Police play in responding to family violence		
20	I have a good understanding of the role that our community agencies play in responding to family violence		
21	Please list three of the indicators of partner abuse which you have seen in your practice.	1. 2. 3.	
22	Have you undertaken any family violence training/education previously? If so, with whom?	Yes / No .....	
23	In your opinion, what are some of the challenges which we may come across in implementing a screening programme for family violence?
